

Project Manager

Role description

As a Project Manager you are responsible for the execution of our projects, ranging from small improvements to large industrial constructions (mechanical, structural, piping, civil).

You need to carry out the following duties:

- Determine the budget of the project (scope definition and contract preparation)
- Defining planning (resources: people, materials, contractors, providers,...)
- Get up a multidisciplinary engineering team
- Defining process installations and writing request for quotations
- Being the first point of contact with the client
- Organize and lead technical and commercial procurement meetings
- Lead commissioning, start-up and close out
- Partying to celebrate new orders and successful projects

Role in the organization

Usually the role of a Project Manager is fulfilled by an experienced Project Manager that has knowledge of leading a team of project engineers/Designers or CAD engineers. He/she is in close contact with our COO, key officers and chain partners.
